The model behind the AutoCAD app is that the drawings created by the user are stored in the cloud. Users can access drawings that have been stored in the cloud and can then share them with other users in a secure manner. A user can also create new drawings from scratch. As of the 12th quarter of 2015, AutoCAD had a market share of 67%, followed by Trimble (16.2%) and Creo Parametric (6.8%). AutoCAD had 30.5 million registered users and more than 3 million active users as of September 2015. The AutoCAD home page estimates more than 20 million drawings are created and shared every day. History AutoCAD was first released by Autodesk in December 1982 on the Apple II platform. In 1984, it was also released for the Commodore 64 and Atari 8-bit family platforms, followed by the MS-DOS, Commodore Amiga, MS-Windows, Mac OS, and Macintosh OS platforms. A second major release occurred in 1987, when AutoCAD was included in all versions of AutoCAD LT, the first integrated system software for drafting. This new release included a mouse-based editing interface and a version of the CAD API that could be used by users of other applications. This release was based on a rewritten operating system and new version of the commercial drawing program SuperPaint, and, as a result, it has a much faster drawing and editing experience. In 1990, the first version of AutoCAD (AutoCAD R18) to be bundled with AutoCAD LT was released. This included a new user interface based on Windows 3.0, integrated SuperPaint (with additional features), and a new drawing engine with 3D capabilities and a variety of new advanced features. In 1992, AutoCAD for Windows was released. This was the first version of AutoCAD to be available on the Windows platform. It was the first version of AutoCAD to support the Windows 3.1 operating system. AutoCAD for Windows includes many new features, including "left and right hand" drafting (drawing with the right hand on the right side of the monitor and the left hand on the left), drafting annotation, editing of existing drawings, and the addition of new dimensioning, text, line, and path commands. AutoCAD for Windows also includes a new "Save to DWG" function that allowed AutoCAD to save drawings to a portable DWG file,

Contribution of the dopaminergic nigrostriatal system to reflex responses to colonic distension in the rat. Functional changes in the dopaminergic nigrostriatal system may contribute to the initiation and maintenance of visceral hypersensitivity, a common feature of functional gastrointestinal disorders. However, the neural mechanisms underlying these processes are not well known. The aim of the present study was to investigate the contribution of the nigrostriatal system to the initiation and maintenance of the startle reflex in rats exposed to colonic distension. Thirty-seven adult male Sprague-Dawley rats were randomly assigned to seven groups ($n = 7$ in each group) and implanted with polyethylene cannulae in the caudate putamen and the lateral and medial prefrontal cortex to measure the startle response. Following a 7-day recovery period, rats were subjected to colorectal distension (CRD) with colonic balloons for 30 min per day (10 cycles of 1-min balloon inflation and deflation). The startle response was measured during a 60-s period immediately before the onset of each balloon deflation and 60-s period immediately after the balloon deflation. Rats received an injection of saline, or the dopamine receptor antagonist, haloperidol, the D1 receptor antagonist, SCH23390, or the D2 receptor antagonist, eticlopride, before each bout of CRD. The startle response after colorectal distension was significantly reduced in rats receiving saline injection and was increased significantly in rats receiving saline injection after 5 days of colorectal distension, but no changes were observed in rats receiving haloperidol injection or injection of SCH23390 or eticlopride. These results indicate that the dopaminergic nigrostriatal system may contribute to the initiation and maintenance of the startle reflex during CRD, at least in male rats. Test for
