Adding text You can edit almost anything, even images, by adding text to them. Generally, you place text over an image with the Type tool. You can then customize the position, font style, and rotation of the text. You can also change the text's color or size, as well as create curved, boxy, or straight lines with the Pen tool. To add text to an image, follow these steps: 1. **Choose a spot for the

Adobe Photoshop is one of the most popular image editors. Its most important feature is its ability to edit layers, work with paint brushes and utilize the information contained in the layers. Q: java.io.EOFException (no kidding!) I am having trouble with this. I have a following code:

```
InputStream inputStream =
socket.getInputStream();
BufferedReader reader = new
BufferedReader(new
InputStreamReader(inputStream));
String line; while ((line =
reader.readLine()) != null) {
outputStream.println(line); if
(line.contains(" ")) {
System.out.println("here is my " +
line.length() + " characters long line ")
```

+ line); } } System.out.println("0,
actually this should be at the end of
code"); socket.close(); reader.close();
outputStream.close(); And what is
going on? It prints this line: here is
my 0 characters long line null and
then I have the following in output:
java.io.EOFException (no kidding!)
0, actually this should be at the end of
code I read that EOFException is
occurring when I try to close
InputStream but, shouldn't the code
be closed after the while? I tried to
code it this way: OutputStream
outputStream =
socket.getOutputStream();

```
BufferedWriter writer = new
BufferedWriter(new
OutputStreamWriter(outputStream));
String line; while ((line =
reader.readLine()) != null) {
outputStream.println(line); if
(line.contains(" ")) {
System.out.println("here is my " +
line.length() + " characters long line "
+ line); } } writer.close();
socket.close();
```

But it didn't help at all. And if I remove the second while loop it is not working. And another strange thing I noticed is that there is no exception in the first case (except of println) and output is still printed

in the second, although in the first I haven't really printed anything. A: When you close an `InputStream`, no data is passed to the operating system (hence the exception). Also closing an `OutputStream` will not close the underlying output stream;

You can use the Quick Selection tool to quickly select a certain area of an image. The polygonal lasso tool is useful for creating a selection. The Pencil Tool allows you to change the color of any pixels you're currently

working on. Often used for making adjustments to the color of an image. The Pen Tool allows you to draw, freehand, with all sorts of shapes and forms. This is a useful tool for creating fine details, and it's used a lot for sketching. The eraser tool allows you to hide pixels, erase mistakes, or reshape objects. The Crop tool lets you remove unwanted parts of an image, such as objects that are off-screen. The Levels tool lets you adjust the brightness and contrast of an image. The Gradient tool lets you mix colors to create a gradual change. It can be used for using non-pixel

images, such as straight lines. Select the Brush Tool The Brush tool is found in the Toolbox. The brush is used to paint on images. You can use it to paint with any type of brush, including pixel and gradient brushes. Pixel brushes change a pixel's color, and can be used to paint with such things as pure black, white, grey, or transparent pixels. You can also use pixel brushes to paint a different color on the pixels of an object in an image. If you're not using a pixel brush, then you can use any type of gradient brush. Gradient brushes can be used to change the color of an

object in an image gradually. For example, you can use a gradient brush to paint a light pink face, then a dark pink face. This allows you to have the face gradually change from pale pink to deep pink. You can also use a gradient brush to paint with transparency so you can see through an object. In addition, you can control the transparency and color of the pixels being painted with this tool.

TIP: If you want to know if a brush or gradient is pixel, pixel-based, or gradient-based, just right-click on a brush or gradient in the toolbox and select 'Check Pixel-Packed Brush'.

Let's look at some examples of using brushes and pens. > Let's say you want to paint some flowers. 1. To start painting, use the Brush tool. 2.
