Most newer Macs include the full version of Photoshop, whereas on older models, only the basic functionality is included, which is just enough to create basic images. The Print, Edit, and Fax options are found in the Edit menu (see Figure 11-1), but all the tools are available from an icon in the menu bar at the top. \*\*Figure 11-1:\*\* Tools covered by the Edit menu. Adding Text Fonts are one of the most important parts of an image. They can make an image exciting and moody or even somewhat quirky and fun. After you've created a new image, selecting the Type tool from the Type Toolbox (accessed from the Tools panel, shown in Figure 11-2) and then choosing a font from the Type Selector will add text to the picture. \*\*Figure 11-2:\*\* Select the Type tool from the Tools panel and the Type Selector, which shows you the available fonts. Selecting the type of font or style you need affects the look of the text on your image. The selection of a font or style is based on the characteristics of the individual letters. When you select, for example, a serif font, such as a Times New Roman or Arial font, you get a variety of different characteristics in the letters, such as footers, descenders, and other fine details. The type of font or style of a type is referred to as a \_font family\_. (Keep in mind that you don't use all the characters in a font to make a word; you use the various letters and numbers available in the font to make a text string.) \* \* \* Adding logos or text Logos or company names can be added to images in multiple ways. At times, you need to add logos that have previously been created in Photoshop. Other times, you use a service like Photoshop's EPSON ePrint Service, which can create or even print a whole line of business cards from one Photoshop file. You can also add a company name to an image for a one-time project, or create a logo for a client for use in print or web advertising. You can create logos in Photoshop or use the Helvetica and Arial font packs. \* \* \* You can insert a logo into an image in two ways: From a logo created outside of Photoshop, such as Adobe Illustrator or Adobe Fireworks

Q: Is it possible to add "Hello, World!" to the login page of an ASP.NET MVC web app? Is there any way to add "Hello, World!" to the login screen of an ASP.NET MVC web app? I.e., when a user is first accessing the site he/she is presented with a screen that says "Hello, World!" and that message stays on the screen until the user logs out. I know that I can create a custom login screen in my Views/Login folder, but I was hoping that there was a way to simply add text to a razor view that is automatically displayed to every new user. A: You can try using the Layout page. It's the default page that is rendered by your main layout. This should go in your ~/Views/Shared/ Layout.cshtml: @RenderSection("JavaScriptRender") @RenderBody() , rather than a mix of parts from Q-Rolls and "official" Rolls-Royces. Royce had an illustrious debut in the Rolls-Royce Phantom III, which debuted the Spirit of Ecstasy ("Beauty is in the Eye of the Beholder") rear-view advertisement. The Phantom III had a wheelbase, which was one of the widest in its class. It had enormous success as a celebrity car in Japan and in the U.S. market. Then in 1978, it was joined by the Phantom IV, which had a wheelbase. This was just below the wheelbase of the AMC Gremlin. It had an engine and was the most-generous car in the class. It had the largest interior in the class. It was widely copied by other manufacturers and rebadged as a Volkswagen, Nissan, and even an AMC Gremlin. Even a copycat Phantom IV was made for British TV in 1983 to celebrate the Queen's Jubilee, although this was a different model to the late-production version. The New Yorker Magazine also had a Phantom IV on their list of the world's best cars. Mental health assessment in the Sydney Obstructive Sleep Apnea/Sleep Disordered Breathing Syndrome Clinic. Obstructive sleep apnea/sleep disordered breathing syndrome (OSA/SDB) is associated with impaired health-related quality of life (HRQoL), a persistent and pervasive negative impact on mood, sleepiness, cognitive impairment and daytime dysfunction. Little is known about the specific nature or frequency of these problems in OSA/SDB. We aimed to establish the prevalence of any psychiatric diagnoses, as well as the frequency of psychiatric comorbidities in OSA/SDB, along with associated mood and sleep quality. All OSA/SDB patients attending a respiratory sleep disorders clinic were invited to participate in this study. All completed the 30-item WHO Well-being Questionnaire (WHO-BREF), which provides a quick and easy measure of global mental health status. Overnight polysomnography was performed and polysomnography variables were used to determine the sleep-disordered breathing severity of the sample. OSA/SDB patients were also administered the Patient Health Questionnaire 9 (PHQ-9) to assess depression, and the Pittsburgh Sleep Quality Index (PSQI) to assess sleep quality. One hundred and seventy-seven patients completed the study (100 male, 77 female, mean age 47.5 years). Comorbid psychiatric diagnoses were reported in 69% of the sample. Mood disorders were reported by 54% of participants, with a general increase in the number of psychiatric diagnoses from mild to more severe sleep-disordered breathing. The reported prevalence of comorbidities in OSA/SDB was much higher than that reported in previous studies, emphasising the need to identify and treat these psychiatric problems effectively. The results of this study have informed the development of a pragmatic new OSA/SDB clinic intervention which includes more regular mental health assessment and treatment. This invention relates to a method of radiography, which uses a radiation image recording and reading-out method employing a stimutable phosphor and, more particularly, to a radiation image recording and reading-out method capable of efficiently carrying out image information recording, which is excellent in the image quality and free from image deterioration. Radiation image recording and reading-out methods, which use a stimutable phosphor, have heretofore been proposed, and some of them have been put into practical use. Specifically, a radiation image of an object is recorded as a latent image in a stimul
