Decker, founded the Black Screen of Death website in 1995. First, Ben started the original BSOD website that still runs on Windows 95, 98, 2000, XP and 7, as well as still operates under the guise as "BlackScreenofDeath.com" to this day in 2019. He called out Microsoft for various flaws that had been reported to them and when nothing was done, released the first driver ever for Windows 95 under the banner of "RDI (Really Dead Interactive)". Ben is a Linux and open source desktop advocate, and currently works for Canonical as Desktop QA. Ben has a Masters degree in Computer Science from the University of West England. What is 'Crack Me'? There's no 'crack me' app. This term usually refers to the idea of, 'Can you crack me?' or 'Can I be cracked?' Basically, is it possible to break into your system? Of course, the answer is yes, and if we assume you are already in a position to do so, we can specify what the attacker would do in this instance. First of all, if you are trying to break into someone else's computer, you need to find it. By this, we mean that you need to find out which computer is 'alive'. Usually, this is done by learning the IP address of the computer and then trying to guess a password of sorts via telnet. In windows systems, you can use Microsoft's telnet client and there is also a version for Linux (apt-get install telnet if you use Ubuntu Linux). If we assume the attacker has found the IP of
